38. (Twice Amended) An ammunition article, comprising:

an injection molded plastic cartridge case body having a closed front end and a second end, wherein the closed front end includes walls that reduce in thickness toward an axial center of the closed front end.

39. (Twice Amended) An ammunition article, comprising:

an injection molded plastic cartridge case body having a closed front end and a second end, wherein the closed front end includes at least one stress concentrator for causing, preferential tearing of the closed front end at the at least one concentrator.

114. (Twice Amended) An ammunition article comprising:

a one-piece projectile having cannelure contours; and

a molded cartridge casing body injection molded around at least a portion of the projectile such that a portion of a wall of the cartridge casing body follows the cannelure contours of the projectile.
